MINI MOBILE SHELVING

“My vision is that our furniture facilitates our customers’ everyday tasks –
while offering maximum storage space requiring minimum surface area.”

We reserve the right to make technical modifications. 11/2006

The **romini** mobile shelving system from Mauser Archive solves space problems in archives and warehouses in no time at all. Because the design phase involved great consideration as to how we could store lots of material even in smaller areas, we have designed a system where the shelf units are arranged closely together, yet accessible simply by rolling to one side. And because we took into consideration the fact that stores are not always confined to dark basement rooms, our shelves are convincing, thanks to their attractive design.

Now, isn't that intelligent?

Twice as much
storage space
on the same floor area ...

[romini mini mobile shelving | 100 % more storage capacity on the same floor area

The system

Fantastic principle requiring little floor space

Practical mobile shelving for an infinite number of applications

Many large warehouses, archives and libraries are furnished in accordance with a mobile shelving principle. Thanks to **romini**, these shelving systems are also available in designs to suit each individual room. For offices and archives, libraries and video shops, travel agencies, shops, retail stores, sales outlets, etc. – in short, anywhere premium space needs to be utilised more efficiently and where tidiness and order are required. Whatever you need to store, **romini** permits perfect organisation. Thanks to manifold interior design features, each shelf unit can be tailored to meet the exact requirements of the goods to be stored, making maximum use of the space available while ensuring both transparency and swift access.

Extremely stable

Each shelf unit can accommodate up to 600 kg/m.

For a flexible future

The interior elements can be easily modified, replaced or added to. Where simple shelves are required today, suspended file pull-outs, pendulum file rails or drawers for EDP storage media can be simply fitted overnight.

[An infinite number of combination possibilities even during the planning phase

[For simple order and tidiness

Interior elements	Unit width (mm)	Useful shelf depth (mm)					
		300	350	400	600	700	800
Steel shelves (bevelled all around, 25 mm)	871	DN	DN	DN	HN	HN	HN
	1,130	DN	DN	DN	HN	HN	HN
Leitz/Elba pendulum rod	871	-	DN	-	-	HN	-
	1,130	-	DN	-	-	HN	-
Zippel pendulum rod	871	-	DN	-	-	HN	-
	1,130	-	DN	-	-	HN	-
Suspended frame (350/700 mm deep, for VL files only)	871	-	DN	DN	-	HN	HN
	1,130	-	DN	DN	-	HN	HN
Pull-out hanging file	871	-	DN	-	-	HN	-
	1,130	-	DN	-	-	HN	-
Drawer	871	-	DN	DN	-	HN	HN
	1,130	-	DN	DN	-	HN	HN
Coat rail (incl. shelf for hats)	871	-	-	-	DN	-	-
	1,130	-	-	-	DN	-	-

DN = featuring full useful depth | HN = featuring half useful depth only

Maximum stability for stacking

Solid steel construction guarantees safety and durability

Each shelf unit has a stable, non-warping steel construction. The interior elements – also made of steel – are suspended via shelf supports or, in the case of suspended frame pull-outs and drawers, with additional screwed connections for safety reasons.

A solid basis is provided by a steel platform frame a mere 50 mm in height and with runner rails arranged on the floor and screwed together on site.

Integrated height-adjusting screws ensure absolute level positioning as well as equal load distribution via pressure plates. The platform panels with durable, non-slip and non-trip synthetic surface (anti-slip granite, speckled in grey and white) are also available with parquet or other finishes.

The mobile container forming the base of each shelf unit runs easily and silently on steel ball-bearing castors.

With its clear and functional design, **romini** is suitable for any room. The fronts, made of all-round bevelled steel – closed or with perforated finish – are available as standard with stove-enamelling in all standard colours on the current colour list or in any other colour as an optional extra.

Platform

- Graphite black RAL 9011

Mobile container

- Graphite black RAL 9011

Frame

- Zinc-coated or light grey RAL 7035

Shelves

- Zinc-coated or light grey RAL 7035
- Graphite black RAL 9011 on request

Other elements

- Zinc-coated or light grey RAL 7035

Functional

- Top rail made of anodised aluminium for inserting labels with transparent covers

Ergonomic

- Practical thrust handle for “rolling” the shelf elements, also made of anodised aluminium

[Simply position the frame on the floor ...

[Attractive fronts – closed or with perforated finish

[romini also available in half-height (1,200 mm)

Platform construction

Accessory elements

- Bookends and drawer dividers of various sizes can be attached to the drawer bases.

- Drawers with central or rear stop prevent contents from sliding through when used from both sides.

- Shelves extend across entire depth.
- Crossed diagonals for shelf reinforcement.
- Depth partitions made of perforated or solid hard fibreboard.
- Central partitions made of sheet steel or hard fibreboard, stove-enamelled in standard colours or other colours on request.

- Side inserts secure contents without depth partitions.
- Sliding brackets can be suspended from underneath upper shelves.

Excellent finish down to the last detail

Durable accessories for increased feasibility

Quality based on experience

The name Mauser Archive traditionally stands for quality materials and finishes. **romini** is produced on largely automated manufacturing lines – for consistently high, certified quality.

For an all-round clean finish

Clearly-contoured fronts, full veneering of edge elements, spacers and securing features for stationary shelving – the quality is apparent right down to the last detail. **romini** cuts a good figure in any room, including representative sales areas. High-quality floor coverings such as strip flooring, for example, reveal further design perspectives.

Appropriate accessories

Depending on the tasks and requirements at hand, the shelf units can be equipped with a variety of practical accessory elements.

Technical details

- Individual shelf units are available in two heights, two unit widths and six depths.
- Up to ten mobile shelving units can be moved at the same time and “in one piece”, whereby space for one passage (min. 750 mm) must be taken into consideration in terms of the requisite floor area. This principle permits unlimited add-on elements.
- Thanks to central locking, an entire system can be secured against unauthorised access.

Flexibility of shelving units

Heights	
Total height (mm)	Internal height (mm)
2,000	1,875
2,300	2,175

Depths	
Total depth (mm)	Useful depth (mm)
310	300
360	350
410	400
635	2x300 or 600
735	2x350
835	2x400

Widths	
Internal unit widths (mm)	Total width incl. side panel and thrust handle (mm)
1x871	1,026
1x1,130	1,285
